

PRESS RELEASE

Brignais, 29th September 2016 – for immediate release

VISION SYSTEMS, LEADER IN ELECTRONICALLY DIMMABLE SOLUTIONS ANNOUNCES ITS PARTNERSHIP WITH PROCURVE GLASS

**MONACO YACHT SHOW – 28th SEPTEMBER TO 1st OCTOBER
BOOTH QL2, JETÉE LUCCIANA**

Vision Systems expands its partnership network and affirms its position as a major player in the marine transportation industry. Vision Systems has signed a strategic partnership with US-based ProCurve Glass. ProCurve Glass is a world leading supplier of bent and flat glass for the marine, automotive and rail industries.

Related to their very complementary know-how and business, Vision Systems & ProCurve Glass have decided to join forces to promote dimmable solutions in the marine, rail and automotive markets for the North American region.

Regarding the production, Vision Systems will deliver prepared subassemblies of the dimmable solution and ProCurve Glass will proceed to the lamination under Vision Systems' license. The electronics will be designed, produced and tested by Vision Systems. The installation of the complete system, including the electronics, will be carried out by ProCurve Glass according to Vision Systems' recommendations.

As an expert in solar protection solutions, Vision Systems is exhibiting its electronically dimmable solutions at Monaco Yacht Show. These systems allow to instantly tune the tint of the window from clear to dark in order to regulate glare and heat entering the boat while preserving the view. They can be controlled individually, through a centralized control panel, or automatically with integrated sensors. Moreover, they turn to dark when unpowered, keeping the interior cooler for low air-conditioning consumption. The electronics are integrated, which reduces maintenance and downtime. Finally, they are suitable for large flat or curved surfaces and are appropriate for retrofit.

Headquartered near Lyon, France, with a production and sales unit in Florida, USA, and a trade office in Singapore, Vision Systems is a tier-one system supplier in the aeronautic, land transport and marine industries, designing and producing bespoke solutions for specific market segments in complex environments. The company's genuine expertise in solar protection places it today among the world leaders in this area and the development of customized entertainment & connectivity solutions allows it to rank as a competitive challenger in embedded systems. Vision Systems combines complementary skills in electronics, mechanics and composite to provide ever more innovative solutions for cost reduction, heightened safety and improved comfort.
