

### Vision Systems dimmable windows

► **Producer:** Vision Systems

► **Web:** [www.vision-systems-marine.com/-Nuance](http://www.vision-systems-marine.com/-Nuance)

Vision Systems has recently gained several commissions in the yacht market to provide tailor-made dimmable solutions for flat and curved windows, and partition walls. The company has also developed electric opening side windows and a glass roof where the front part rises up to create a 'glass pergola' effect. The technology includes specialist glass lamination, integrating a silver-grey fabric mesh for design and privacy, and an SPD film for the dimmable function. Vision Systems' dimmable solutions provide variable shading from clear to dark (over 99.9% light blockage), giving protection from UV light while preserving the view and keeping the interior cooler, particularly when at anchor. Control is via a customisable graphic interface.
