

## Smart-Vision Camera Monitoring System

VISION SYSTEMS — SEPTEMBER 21, 2017

The **Vision Systems Smart-Vision Camera Monitoring System** replaces rearview mirrors with high-definition cameras and interior displays. Smart-Vision is designed to provide optimized visibility and enhanced ergonomics. The system helps eliminate glare and features automatic adjustment of the screens' brightness to ensure excellent visibility in all lighting conditions. The additional Savety-Mirror solution offers lane changing assistance, blind spot detection and high-speed and long-distance vehicle detection, and can be integrated into the Smart-Vision system without additional cameras.
