

PRESS RELEASE

Brignais, 14<sup>th</sup> October 2016 – for immediate release

## **VISION SYSTEMS EXHIBITS ELECTRONICALLY DIMMABLE AND IFE SOLUTIONS AT AIRCRAFT INTERIORS EXPO ASIA 25-27 OCTOBER BOOTH G51**

As an architect of innovations offering tailored solutions to the aeronautic market, Vision Systems will showcase its **solar protection solutions including Electronically Dimmable Windows (EDWs) and wireless IFE system dedicated to regional and high-end commercial airlines.**

**Vision Systems' electronically dimmable solutions allow passengers to tune the tint of their window from clear to dark in order to regulate daylight, glare and heat entering in, while preserving the view.** They enhance visual, thermal and acoustic comfort for a greater wellness atmosphere.

Vision Systems' EDWs are unique on the market today and offer **many advantages over other systems.** Based on SPD technology (Suspended Particle Device), these EDWs provide infinite variable shading from fully clear to an extremely dark state (over 99.9% light blockage) and **instant response time.** They contribute to a reduction of air conditioning consumption and **automatically switch to their darkest possible state when unpowered,** maximizing heat rejection and keeping the interior cooler, with a reduction of inside temperature up to 10°C/18°F. These solutions block more than 99.9% of harmful UV light, 99.9% of IR with an additional integrated anti-IR film, and their fabrication involves **noise barriers** to keep the interior quieter.

Vision Systems' EDWs offer many other benefits. They deliver a **weight reduction** of about 30% compared with motorized shades, and do not add weight in comparison to a window with a manual shade. Furthermore, they have no moving parts as the **electronics are fully integrated,** reducing maintenance costs and downtime.

They can be incorporated into **flat or curved surfaces (2D, 3D),** use **plastic, glass or composite glass,** offer an unprecedented optical quality. All these solutions can come as a whole to replace the entire window. The installation is often limited to a simple mechanical operation which is also very advantageous for the **aftermarket.**

Vision Systems' dimmable solution range also includes privacy and partition solutions.

Originally intended for passengers to improve their flying experience, these systems have expanded to now being considered for the **cockpits,** not only in the form of a dimmable sun visor but also as an add-on solution covering the entire side windows.

Vision Systems will also exhibit high-end **motorized roller or pleated shades** with synchronizing system and diagnosis assistance. These shades are customizable and offer a high-quality fit and finish. As the world leader in cockpit solar protection, Vision Systems will showcase roller blinds and sun visors specifically adapted to the pilots' environment.

Vision Systems' **IFE solution** will be displayed in a compact version. This wireless BYOD system ensures high customer satisfaction and ancillary revenues. It comprises Wi-Fi AVOD allowing the connection of 200 personal devices simultaneously with one box, with a rich and varied content including movies, music, games, **daily press, extensive tourist information, ticketing, local advertising** with discount vouchers and **priority data flows** for safety videos and announcements putting the tablets on hold.

Other options include broadcast or **connectivity** for internet access, video conferencing and VoIP, as well as remote diagnosis, software upgrade and audio & video content updates via a **ground platform**.

Different configurations are possible with **personal or company tablets**. For each customer, Vision Systems develops a **customized user-friendly interface and content**. Moreover, the airlines can provide Vision Systems' entertainment solution to their passengers either via a downloadable application running on all major operating systems or via web browsers.

Vision Systems' offer guarantees a quick Return On Investment.

Some of Vision Systems' **customer references in aeronautics** include: Dassault, Epic, Airbus Helicopters, RUAG, HondaJet, BCA, Sabena Technics, ATR, SuperJet International, La Compagnie, Embraer, Boeing...

*Headquartered near Lyon, France, with a production and sales unit in Florida, USA, and a trade office in Singapore, Vision Systems is a tier-one system supplier in the aeronautic, land transport and marine industries, designing and producing bespoke solutions for specific market segments in complex environments. The company's genuine expertise in solar protection places it today as the world leader in this area and the development of customized entertainment & connectivity solutions allows it to rank as a competitive challenger in embedded systems.*

*Vision Systems combines complementary skills in electronics, mechanics and composite to provide ever more innovative solutions for cost reduction, heightened safety and improved comfort.*
