Vision Systems to Unveil Touchscreen Smart Window Technology at AIX

Vision Systems will showcase the latest generation of its electronically dimmable windows, including its Crystal Cabin Award-shortlisted Acti-Vision Window, at the 2017 Aircraft Interiors Expo in Hamburg on April 4-6. The interactive smart window technology allows passengers to access in-flight services, including interactive maps, tourist information and food and beverage orders, via a touchscreen interface. Vision Systems' Nuance V2 window, which provides an optical haze close to three percent and clarity as high as 99.8 percent, will also be on display at AIX.
