

## PRESS RELEASE

Brignais, 10<sup>th</sup> September 2021 – for immediate release

# VISION SYSTEMS UNVEILS NEW PREMIUM SHADING SOLUTIONS AND AMBIANCE MANAGEMENT SYSTEM FOR A UNIQUE PASSENGER EXPERIENCE!

AIRCRAFT INTERIORS EXPO, VIRTUAL EDITION FROM 14 – 16 SEPTEMBER 2021

Solar protection systems expert Vision Systems will present its latest innovations dedicated to **first- and business-class** passengers. The exhibited solutions will particularly draw the attention of high-end airlines and designers.

**SPD dimmable windows** with distinctive characteristics adapted to each class will be showcased. These solutions eliminate shades that block the view and require regular maintenance while protecting passengers from unwanted daylight or glare, and include innovative features such as complete **privacy, multi-zoning, mood-lighting, transparent touch control and integrated information display**.

A premium shade with breakthrough feature will be revealed... a motorized **triple window shade**.

Vision Systems will also present a **smart glass partition** showing **videos** such as traveling information or advertising. When nothing is displayed, this divider can remain transparent, or opaque to offer **privacy** between classes.

Vision Systems stays one step ahead in improving the passenger experience with its new concept of **ambiance management system**.

Depending on the chosen **ambiance** or specific moment of the journey, Vision Systems' **ambiance management system** generates the right atmosphere to offer each passenger a unique experience. Through a tablet or control panel, the traveler can select a "mood", such as reading, sleeping or waking up, leading to the automatic **synchronization of the shade, the dimmable windows and the lighting** to create the perfect adequacy between the selected mood and the lighting atmosphere.

Each of Vision Systems shading systems can be controlled individually directly at the window with a transparent touch panel or simultaneously through the **ambiance management system**.

Developed in-house based on Vision Systems know-how in cabin management systems, other elements of the cabin could be managed by the application (temperature, image, sound) with individual or crew control.

The elegant design of Vision Systems' smart solutions convey a **modern image for brand differentiation**.
